Game Assets

Step		Detailed Instructions
<input type="checkbox"/>	Download the Game Assets	Download zip archive containing project files, staging somewhere convenient, e.g., Desktop, My Documents, USB flash drive, etc.
<input type="checkbox"/>	Extract Files	Extract archive, using program of choice, to desired location on computer/flash drive

Creating the Project

Step		Detailed Instructions
<input type="checkbox"/>	Launch Construct 3	Navigate to editor.construct.net in your browser, e.g., Chrome
<input type="checkbox"/>	Log in to Construct 3	<ul style="list-style-type: none"> ■ USER ACCOUNT > LOG IN <ul style="list-style-type: none"> ○ Username: <enter Construct 3 username> ○ Password: <enter Construct 3 password> ○ Click "Log in"
<input type="checkbox"/>	Change Site Settings	<ul style="list-style-type: none"> ■ To the left of the web address i.e., https://editor.construct.net, click the lock icon ■ Click "Site Settings" ■ Change "Pop-ups and redirects" to "Allow" ■ Reload page for changes to take effect
<input type="checkbox"/>	Create New Project	<ul style="list-style-type: none"> ■ PROJECT > NEW <ul style="list-style-type: none"> ○ New Project <ul style="list-style-type: none"> ■ Name: Platformer ■ Choose preset: 1080p landscape ■ Select CREATE
<input type="checkbox"/>	Save Project*	<ul style="list-style-type: none"> ■ PROJECT > SAVE AS > CLOUD SAVE ■ Select a cloud service, e.g., Dropbox, OneDrive, Google Drive ■ Authenticate and authorize service ■ Navigate to desired storage location, and save project using "Platformer.c3p" for the filename ■ Select SAVE <p>Note: To access your project in the future:</p> <ul style="list-style-type: none"> ○ PROJECT > OPEN RECENT > "Platformer.c3p" <li style="text-align: center;">- OR - ○ PROJECT > CLOUD OPEN > Navigate to "Platformer.c3p" <p>* Assumes use of Google Drive</p>

Project Properties

Step		Detailed Instructions
<input type="checkbox"/>	Set Project Properties	<ul style="list-style-type: none"> ■ Select "Platformer" > Set/confirm the following properties: <ul style="list-style-type: none"> ○ About <ul style="list-style-type: none"> ■ Name: Platformer ■ Version: 1.0.0.0 ■ Description: A model platform-style game ■ ID: com.colestock.game.platformer ■ Author: <enter your name> ■ Email: <enter your email> ■ Website: <enter your website> ○ Startup <ul style="list-style-type: none"> ■ First layout: Layout 1 ■ Loader style: Percentage text ○ Display <ul style="list-style-type: none"> ■ Viewport size (Width x Height): 1920 x 1080 ■ Orientations: Landscape ○ Advanced <ul style="list-style-type: none"> ■ Runtime: Construct 3 ○ Editor <ul style="list-style-type: none"> ■ Check "Bundle addons"
<input type="checkbox"/>	Save Project	PROJECT > SAVE or (Ctrl + S) or Click 

Setting the Stage

Step		Detailed Instructions
<input type="checkbox"/>	Rename Layout	Right-click "Layout 1" > Rename to " Level 1 "
<input type="checkbox"/>	Rename Event Sheet	Right-click "Event sheet 1" > Rename to " Level 1 Event Sheet "
<input type="checkbox"/>	Set Layout Properties	<ul style="list-style-type: none"> ■ Select "Level 1" > Set the following properties: <ul style="list-style-type: none"> ○ Layout <ul style="list-style-type: none"> ■ Size (Width x Height): 3840 x 1080 ○ Editor <ul style="list-style-type: none"> ■ Margins (Width x Height): 500 x 500 ■ Check "Show grid" ■ Check "Snap to grid" ■ Grid size (Width x Height): 96 x 96
<input type="checkbox"/>	Rename "Layer 0"	Right-click "Layer 0" > Rename to " Background "
<input type="checkbox"/>	Create Sky Tiled Background	<ul style="list-style-type: none"> ■ Right-click OBJECT TYPES > Select "Add new object type" ■ Select "Tiled Background" > Name: "Sky" > INSERT

		<ul style="list-style-type: none"> ■ When crosshair appears, click inside "Level 1" layout > Tiled Background Editor will appear ■ Click folder icon > Browse to and OPEN: sky-background-1024x1024.png ■ Click X to close; Sky object should be on "Background" layer
☐	Position Sky Background	Snap the Sky object to the upper left-hand corner of the layout (0,0) and enlarge until it covers the entire layout; it is OK if it covers more than the visible layout
☐	Create Ground	<ul style="list-style-type: none"> ■ Right-click OBJECT TYPES > Select "Add new object type" ■ Select "Sprite" > Name: "Ground" > INSERT ■ When crosshair appears, click inside "Level 1" layout > Animations Editor will appear ■ Click folder icon > Browse to and OPEN: ground-96x96.png ■ Select "Edit the image points" option <ul style="list-style-type: none"> ○ Change existing "Origin" image point <ul style="list-style-type: none"> ■ Set X to 0 ■ Set Y to 0 ■ Click X to close; Ground object should be on "Background" layer
☐	Duplicate Ground	Create a 40 x 2 (Width x Height) section of Ground objects using Ctrl + drag (left mouse button) at the bottom of the layout
☐	Lock "Background" Layer	Select "Background" layer > Click lock icon
☐	Create "Game" Layer	<ul style="list-style-type: none"> ■ Under "Layers" > Right-click "Add layer at top" > Rename new layer to "Game" ■ Make sure the "Game" layer is active, unlocked, and listed above the "Background" layer
☐	Create Grass	<ul style="list-style-type: none"> ■ Right-click OBJECT TYPES > Select "Add new object type" ■ Select "Sprite" > Name: "Grass" > INSERT ■ When crosshair appears, click inside "Level 1" layout > Animations Editor will appear ■ Click folder icon > Browse to and OPEN: grass-96x96.png ■ Select "Edit the image points" option <ul style="list-style-type: none"> ○ Change existing "Origin" image point <ul style="list-style-type: none"> ■ Set X to 0 ■ Set Y to 0 ■ Click X to close; Grass object should be on "Game" layer
☐	Duplicate Grass	Create a 40 x 1 (Width x Height) section of Grass objects using Ctrl + drag (left mouse button) on top of the Ground

	Create "Solids" Family	<ul style="list-style-type: none"> ■ Right-click FAMILIES > Select "Add family" <ul style="list-style-type: none"> ○ Click "Grass" ○ Click "Add" to place in family > OK ■ Right-click "Family1" > Rename to "Solids"
	Assign Behavior to "Solids" Family	<ul style="list-style-type: none"> ■ Right-click "Solids" Family > Select "Family Behaviors" <ul style="list-style-type: none"> ○ Click "Add new behavior" ○ Select "Solid" under "Attributes" > ADD ○ Click X to close
	Lock "Game" Layer	Select "Game" layer > Click lock icon
	Unlock "Background" Layer	Select "Background" layer > Click lock icon
	Create Bush	<ul style="list-style-type: none"> ■ Right-click OBJECT TYPES > Select "Add new object type" ■ Select "Sprite" > Name: "Bush" > INSERT ■ When crosshair appears, click inside "Level 1" layout > Animations Editor will appear ■ Click folder icon > Browse to and OPEN: bush-96x58.png ■ Select "Edit the image points" option <ul style="list-style-type: none"> ○ Change existing "Origin" image point <ul style="list-style-type: none"> ■ Set X to 0 ■ Set Y to 58 ■ Click X to close; Bush object should be on "Background" layer
	Duplicate Bush	<p>Create a couple of Bush objects using Ctrl + drag (left mouse button) on top of the Grass.</p> <p>Note: Check and uncheck "Snap to grid" option for maximum control over placement of objects on the layout!</p>
	Lock "Background" Layer	Select "Background" layer > Click lock icon
	Preview Layout	From "Level 1" layout > Click "Preview" in main toolbar
	Save Project	PROJECT > SAVE or (Ctrl + S) or Click
